INTERNAL SUMMARY: SITE HAS AN OBJECT WHICH IS
BEING WORKED ON BY SITE PERSONNEL. THE OBJECT
LOOKED AT IN THE NEAR FUTURE, GOES THROUGH A
STATE OF HIGH ENERGY + INSTABILITY. IT THEN SEEMS
TO GO INTO A DORMANT STATE AFTER SOME TIME.

SIX AT TIME INDICATED BY ANOTHER +
ASTONISH, OBJECT SEEMS TO SUDDENLY
RADIATE OUTWARD "PRESSURE". PROSENTER
DOES NOT EXIST IMMEDIATELY AFTERWARDS. OBJECT
STARTS TOWARD PERSISTENT STAGE (BUT IS STILL
ACTIVE). THIS SUDDEN OUTWARD PRESSURE
DOES NOT SEEM LIKE A ^{SUDDEN} EXPLOSION, BUT LIKE
AN EXPLOSION IN SLOW MOTION.

~~AFTER~~ SOME TIME SHORTLY AFTER THE
"SLOW EXPLOSION" THE SITE CARRIES AN IMPRESSION
OF THICKS FALLING INWARD.

BEFORE THE "SLOW EXPLOSION" THE SITE
HAS A VERY TENSE, ALMOST VIBRATIONAL, FEEL TO IT.
(JELLY)

(20)

AOL SUMMARY TO RECEIVED MY OWN
CONFUSION:

THE TENSION WOULD RULERS ABRUPTLY
SOME TIME BEFORE THE "EXPLOSION", AND THEN
STANDBY CIRCUITS.

I CAN'T IDENTIFY THE "TENSION". IF
IT WOULD RADIATION, IT WOULD SHARPLY INCREASE
AT THE TIME OF THE "EXPLOSION". IT DOESN'T. IF
IT WOULD CHARGE OR ELECTRIC, IT WOULD BE
SUDDENLY RECEIVED. IT ISN'T. AFTER THE
"EXPLOSION", IT BEGINS TO TAPE OFF, AS THOUGH
PAIN SLOWLY AWAY (AOL: LIKE A CAPACITOR DISCHARGING).
